

Classlink - How to Update an App Password

How to update an app password from the Classlink Dashboard

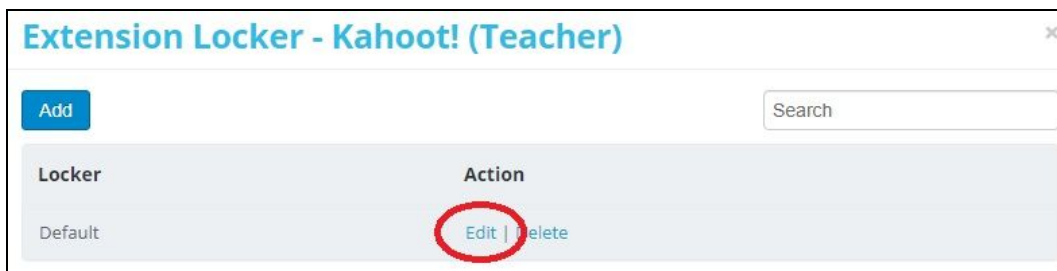

Sometimes there are websites and services that force us to update our passwords when they expire, or maybe we type a password incorrectly when Classlink prompted us for one. Fortunately, Classlink provides an easy way to update that password right from the Dashboard.

Create a folder

1. Find the app you need to update, right click it, and select **Update Password**.

2. Click the **Edit** button underneath **Action**.

3. Make the appropriate changes to either your username or password, then click **Save**.
